Height	102 mm
Type	FS 1000
WebshopURL	https://www.bosta.com/en-gb/hunter-automation-field-server-grey-type-fs-1000-7038557

PRODUCT INFORMATION

The Hunter FS-3000 and FS-1000 Field Servers connect irrigation systems to a configurable building and industrial automation gateway. Integrators can easily interface irrigation control from Hunter ACC2 and ICC2 controllers to networks in commercial buildings, industrial plants, and smart cities. Both models provide complete and direct access to all controller commands and reports in BACnet, Modbus, RESTful API, and many other automation network types. Since they don't require an internet connection, they allow integrators to create personalised commands and interactions within their own custom control dashboards. Hunter Field Servers are designed to connect to Hunter A2CLAN or LANKIT modules, or the A2C-WIFI or WIFIKIT modules for wireless 2.4 GHz operation.
