Number of Stations	8

PRODUCT INFORMATION

Steer your irrigation in the right direction with the Hunter X-Core. Switch off the watering system in your garden - or switch it on remotely. Program the flexible irrigation programs and set them varying start and running times. And rely on its integrated short-circuit protection. That what the Hunter X-Core has to offer. A versatile irrigation controller to steer all sprinkler systems in the right direction. [BUTTON] Order now Straightforward operation Operate this introductory model among the controllers from the comfort of your lounger in the back garden with one of the Hunter remote controls. The X-Core is compatible with the Solar Sync and the Wireless Solar Sync systems. This application automatically adjusts the sprinkling schedule to suit the local weather situation. As a result, you use less water. There's no more need to worry about whether you are giving too much or too little water. You can simply rely on the Solar Sync software. Solar Sync makes the X-Core the permanent anchor of your irrigation project. Specifications of the X-Core - Number of stations: 2, 4, 6 or 8. - Three flexible programs, each has four start times. - QuickCheck ™ provides a straightforward diagnosis of faulty field wiring and bypasses the station if it short-circuits, preventing damage to the system. - The Easy Retrieve ™ memory makes a back-up of the entire irrigation schedule. - With Cycle and Soak, the irrigation times are shorter, giving the soil more time to absorb the water, so no water is wasted and it prevents

runoffs in areas with differences in height or shallow topsoil. - Irrigation is slowed down if the antileak check valves are slow to close or the pump is slow to charge, saving both power and water. Would you prefer an X-Core outdoor model? The outdoor model comes with an integrated key lock to protect the controller against vandalism. The Hunter X-Core's additional features - The "hide programs" setting gives you the option of seeing only one program and one start time at a time. - Put the irrigation on hold for up to 99 days in low season.
