

Elbe Exclusive Line Pool liner PVC sand beach 10m type Elite Anti-Slip 1.65m (7019080)

 **ELBE®**
POOL SURFACE | MADE IN GERMANY

TECHNICAL SPECIFICATIONS

Type Elite Anti-Slip

Material PVC

Length 10 m

Thickness 1.9 mm

Width 1.65 m

Colour sand beach

PRODUCT INFORMATION

Protects against sun cream

Tests show that Elite's® stain resistance is 300% better than the competition.

Resistance to waterline stains

Waterline stains require little effort to remove using approved swimming chemicals. This means less maintenance. With regular pool surfaces such as tiles, fibreglass or a weaker membrane, you are obliged to clean stains very quickly to achieve the best results. With Elite® it is easy to maintain a clean pool with much less effort.

The Elite® membrane is much easier to clean. The reinforced membrane prevents the penetration of sunscreens, cosmetics and other chemicals that weaken the membrane, causing stains and discoloration, especially on water under the influence of UV radiation. No more intense cleaning!

Organic residues and humidity can allow bacteria to grow behind weaker membranes. The durable Elite® membrane prevents unhealthy bacteria from penetrating the membrane and growing behind it.

Elite's® unique formula protects against:

UV radiation – one of the main reasons for deterioration of the pool surface.

Chlorine discoloration – this usually occurs after a longer period. The durable membrane is resistant to strong chemicals such as chlorine in both large commercial and smaller residential swimming pools.

Longer life span

With regular surfaces such as tiles, fibreglass or a weaker membrane, you are obliged to clean stains very quickly to achieve the best results for your swimming pool. With Elite® it is easy to keep your pool clean with less effort, meaning less maintenance, a longer life span and less frequent renovations.

World's safety and the healthiest choice for you and your family!
