## PRODUCT INFORMATION

The Rain Bird Spray head, type R-VAN is used with the 1800 series pop up. We recommend this spray head for efficient irrigation and garden installation.

The R-VAN nozzle series matches the precipitation rate of the 5000 series equipped with MPR nozzles which allow installations and the layout calculations are designed to be much simpler. The R-VANs produce larger droplets and a thicker stream of water which allow them to have a high wind resistance therefore reducing water waste.

Not only the R-VANs are compatible with all the 1800 series pop ups but their performance and versatility is unmatched by reducing running times by over 33% and by having a full range of adjustable, full circle and strip nozzles that covers both large and small areas. The top is coloured for easy radius and arc identification.
