

Tank level indicator 230VAC (7023843)

TECHNICAL SPECIFICATIONS

Max. Performance	15 Watt
------------------	---------

Length	35 mm
--------	-------

Voltage	230VAC
---------	--------

Cable length	20 m
--------------	------

Height	125 mm
--------	--------

PRODUCT INFORMATION

The RAINMASTER D24 is a fill level indicator for water tanks with a depth up to 3 metres. For rainwater systems using a submersible pump, the Rainmaster D automatically operates a magnetic valve, controlling the supply of mains water top-up to the tank should the rainwater level in the tank run low. On activation, the mains water is passed through a so-called "air gap", as per DIN EN1717 regulations, and from there to the tank via a pipe.
