

Suction filter with float and coarse filter brass 1" female thread stainless steel (7023840)

TECHNICAL SPECIFICATIONS

Material	brass
Ball material	PE
Material filter element	stainless steel
Connection	female thread
Size	1"

PRODUCT INFORMATION

This floating suction filter ensures that the cleanest water from just below the surface is always drawn from the tank. Its built-in filter protects both the pump and the toilet and washing machine inlet valves against potential contaminants in the tank water. The filter mesh width is selected to ensure maintenance intervals are minimised. The brass backflow valve prevents the intake line from running dry.
