TECHNICAL SPECIFICATIONS

Temperature range	-10°C - 45°C

PRODUCT INFORMATION

The Euro Midi electrofusion welding unit is suitable for the welding of all electrofusion fittings up to diameter 400mm. Reading of the barcode by means of a scanner or manual entering of the 24 digits shown under the barcode, or manually by setting of the welding voltage and time. The heating power is automatically adjusted. Automatically (scanner or 24 digits) the heating power is adjusted by the ambient temperature. A display and the intuitive keyboard guide the operator during all operative phases of the programming, displaying the evolution of ambient temperature, the welding voltage and current, the cycle time, the progressive number of weldings and the possible error or malfunctioning messages. Supplied with USB connection port (pen drive is not included) to allow the transfer of the welding reports in PDF format to the PC.
