Width	2 m

PRODUCT INFORMATION

SBG membranes are mainly used as high-quality reinforced membranes for public swimming pools, pools in leisure grounds, hotel swimming pools and exclusive private pools. Our swimming pool membranes are the ideal product to line newly built or redeveloped swimming pools indoors and outdoors, no matter what shape or how big they are.
The membrane has extreme tensile strength and is very tough which guarantees best quality for many years of bathing fun. Absolutely watertight and with antibacterial effect the membrane reaches longevity through its reinforced fabrics inlayed. Our swimming pool linings are certified under the high requirements of the German health authority and comply with all chemical and physical directives. SBG 150 membranes can be installed in redeveloped pools on nearly every foundation, such as tile, concrete, metal, wood or plastic. On a protection and separating layer made of fleece the membranes are welded together building a seamless homogeneous and 100% waterproof surface.
