PRODUCT INFORMATION

Superior Clarity: Glass Pearls redefine water filtration with their small, effective size of only 0.6mm to 0.8mm. This narrow particle size range enables in-depth filtration and extends operating cycles between backwashing. In rigorous laboratory tests, these Glass Pearls have demonstrated their ability to filter water down to below 3 microns, setting a new standard in water clarity. **Safe and Smooth:** Your peace of mind is paramount. Glass Pearls are spherical and devoid of sharp edges, making them not only highly effective but also safe to handle and service. In the unlikely event of a filter failure, there's no need to worry – these Glass Pearls pose no risk of injury to swimmers, ensuring the well-being of all who enjoy your aquatic facilities. **High Purity:** Our Glass Pearls are crafted from 100% virgin glass and are chemically inert. **Save Water:** Glass Pearls' unique spherical, smooth shape significantly reduces backwash water requirements. With up to 20% less water consumption during backwashing compared to traditional sand media, you not only save valuable resources but also time, making your operations more sustainable and efficient. **Time Saving:** Installation is a breeze, and starting up your media filter is swift and straightforward. Thanks to the high purity of Glass Pearls, very little backwashing is needed to cleanse the filter media before commissioning the filter, allowing you to get your system up and running without unnecessary delays.
